

How do Scientists Organize Data?

Data Tables and Graphs

- Visually organize data
- Allows you to quickly and easily observe trends

Which Drink Do You Like Best?

Coke Water Iced Tea
Pepsi Gatorade

How Can We Organize this Data?

- Group common answers

How Can We Organize this Data?

- Group common answers
- Make a table of data

Grouping

Drink	Number
Coke	
Pepsi	
Water	
Iced tea	
Gatorade	

By Drink

How Can We Organize this Data?

- Group common answers
- Make a table of data

Table

Drink	Number
Coke	
Pepsi	
Water	
Iced tea	
Gatorade	

By Drink

How Can We Organize this Data?

- Choose a graph type to display your data.

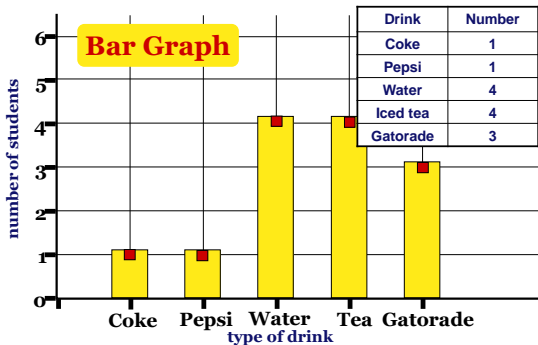

-Used to compare quantities

-Used to show change over time

Which Drink Do You Like Best?

Rules for Line Graphs

1. Title your graph – Dependent vs Independent

2. Label x-axis and y-axis

- Independent Variable goes on x-axis (horizontal)
- Dependent goes on the y axis (vertical)
- Be sure to include units

Rules for Line Graphs

3. Make a constant scale

- In science, scales do not have to start with 0.
- Scales can also be different for each axis.
- Spread out the data as much as the paper allows.

Rules for Line Graphs

3. Make a constant scale

- Refer to the data table and find the range of numbers (largest - smallest)
- Count the **number of boxes**
- **Range** = Scale
- Number of Boxes**
- Best scales are whole number multiples (1, 2, 5, 10)

Rules for Line Graphs

4. Plot your data points, using a dot surrounded by a larger circle.

5. Connect the dots using a line of best fit.

Line of best Fit

Line of best fit emphasizes the overall trend shown by all the data taken as a whole

Rules for Line Graphs

6. If multiple sets of data exist, use a different color or shape to indicate the difference.

➤ Also add a legend.
